## **Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

## **Listing of Claims:**

- 1. **(Currently Amended)** A wall structure having an above ground wall, said wall structure comprising in combination:
- a) a plurality of footings disposed at least partially in the ground at each end of said wall;
- b) said wall including <u>at least</u> a lintel, <u>each end of said lintels being</u>

  <u>located upon and receiving support at each end from adjacent ones of said footings to locate each of said lintels above ground and a plurality of courses extending upwardly form each of said lintels <del>lintel</del>;</u>
- c) at least one tensioning rod extending upwardly from <u>each of said lintels</u>

  lintel into <u>at least some of said plurality of courses said wall;</u> [[and]]
  - d) a post extending upwardly from each said footings; and
- e) at least one further tensioning rod extending upwardly from within each of said footings and into the respective one of said posts footing and adapted for resisting tilting of said wall.
  - 2. **(Original)** The wall structure as set forth in Claim 1 including a plate

disposed on each of said footings for supporting an end of said lintel.

- 3. (Currently Amended) The wall structure as set forth in Claim 1 wherein including a post extending from each of said footings, said at least one further tensioning rod extending upwardly into said post, each of said post posts includes including a vertical slot for receiving an end of said wall.
- 4. **(Original)** The wall structure as set forth in Claim 3 including a plate disposed on each of said footings for supporting said post and said lintel.
- 5. (Currently Amended) The wall structure as set forth in Claim 3 [[4]] wherein an end of each of said lintels lintel extends into said slot of each of adjacent ones of said posts said posts.
- 6. **(Currently Amended)** The wall structure as set forth in Claim 3 including at least one rebar disposed longitudinally within <u>each of said lintels lintel</u> and grout for imbedding said rebar <u>within said lintel</u> and a lower end of <u>at least one of said tensioning rods rod within said lintel</u>.
- 7. **(Original)** The wall structure as set forth in Claim 1 wherein said lintel is generally C-shaped in cross section.

- 8. (Currently Amended) The wall structure as set forth in Claim  $\underline{1}$  [[7]] wherein said lintel includes a longitudinally oriented upwardly facing opening.
- 9. **(Original)** The wall structure as set forth in Claim 8 wherein at least one of said tensioning rods extend upwardly through said opening.

## 10-16. (Cancelled)

- 17. **(Currently Amended)** The wall structure as set forth in Claim 1 wherein said <u>plurality of</u> courses comprise concrete masonry units.
- 18. **(Currently Amended)** The wall structure as set forth in Claim 1 wherein said <u>plurality of</u> courses comprise bricks having at least one passageway therethrough.

## 19-22. **(Cancelled)**

- 23. (Currently Amended) A method for constructing an above ground wall having a plurality of wall sections, said method comprising in combination:
- a) developing a footing at least partially in the ground at each end of the wall sections of the wall to be built;
- b) installing at least one tension rod to extend upwardly from each footing;

- c) placing a plate on each footing;
- d) building a post on each plate with blocks to provide a vertical cavity for receiving said the at least one tensioning rod and to provide a vertical slot for receiving an end of the wall section to be built;
- e) placing a lintel on each of the plates to locate the ends of the lintel in the slots of the respective posts and above ground <u>for supporting a wall section</u>;
- f) laying a plurality of courses upon the lintel to define the wall section, each of the courses extending into the slots of the respective one of the posts; and
- g) installing a plurality of tensioning rods extending from within the lintel upwardly into the wall <u>section in conjunction with during</u> exercise of said step of laying.
- 24. **(Original)** The method as set forth in Claim 23 wherein said step of laying includes the step of laying concrete masonry units.
- 25. (Original) The method as set forth in Claim 23 wherein said step of laying includes the step of laying bricks.
- 26. (Currently Amended) A wall structure having an above ground wall, said wall structure comprising in combination:
- a) a plurality of footings disposed at least partially in the ground at each end of said wall;
  - b) said wall including a lintel, each end of said lintel being supported

above ground on adjacent ones of receiving support at each end from said footings and a plurality of courses extending upwardly from [[form]] said lintel;

- c) at least one <u>tensioning</u> rod extending upwardly from said lintel into said wall;
- d) a post extending from a respective one of said plurality of footings for supporting an end of said wall, said post including a vertical slot for receiving the corresponding end of said wall; and
- e) at least one further <u>tensioning</u> rod extending upwardly from within each [[a]] respective one of said plurality of footings into the respective one of said posts and adapted for resisting tilting of said post.
- 27. **(Original)** The wall structure as set forth in Claim 26 including a starter course disposed on the respective one of said plurality of footings for supporting an end of said lintel.
- 28. (Currently Amended) The wall structure as set forth in Claim 26 including at least one rebar disposed longitudinally within said lintel and grout for imbedding said rebar and a lower end of said <u>tensioning</u> rod within said lintel.
- 29. **(Original)** The wall structure as set forth in Claim 26 wherein said lintel is generally C-shaped in cross section.
  - 30. (Currently Amended) The wall structure as set forth in Claim 26 [[29]]

wherein said lintel includes a longitudinally oriented upwardly facing opening.

- 31. (Currently Amended) The wall structure as set forth in Claim 30 wherein each of said tensioning rods extends extend upwardly through said opening.
- 32. (Currently Amended) A method for constructing an above ground wall, said method comprising in combination:
- a) developing a footing at least partially in the ground at each end of the wall to be built;
- b) installing at least one <u>tensioning</u> rod to extend upwardly from each footing;
- c) building a post on each footing with blocks to provide a vertical cavity for receiving the at least one tensioning rod and to provide a vertical slot for receiving an end of the wall to be built;
- d) locating the ends of a lintel in the slots of the respective posts and <u>upon</u> the footings to locate the <u>lintel</u> above ground;
- e) laying a plurality of courses upon the lintel, each of the courses extending into the slots of the respective one of the posts; and
- f) installing a plurality of <u>tensioning</u> rods extending from within the lintel upwardly into the wall <u>in conjunction with during</u> exercise of said step of laying.
  - 33. (Original) The method as set forth in Claim 32 wherein said step of

laying includes the step of laying concrete masonry units.

- 34. **(Original)** The method as set forth in Claim 32 wherein said step of laying includes the step of laying bricks.
- 35. **(Previously Added)** The method as set forth in Claim 32 wherein said step of building includes the step of laying blocks.
